DETAILED ACTION

Allowable Subject Matter

1. Claims 2-10, 14-21 and 26-31 allowed

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 12 rejected under 35 U.S.C. 103(a) as being unpatentable over Collins, III et al. (6,547,249) in view of Tsai (6,966,674).

Regarding Claim 12, Collins et al. disclose monolithic series/parallel LED arrays formed on highly resistive substrates where in Fig. 7A it is disclosed an electrically insulating substrate 20, a plurality of light emitting diode mesas disposed generally parallel to one another on the substrate the mesas being isolated from one another, by dielectric layer 30, each mesa defined by a stack of layer including a first conductivity layer 22 disposed between the substrate 20 and the second conductivity type layer 24 and electrically conductivity connection material 34 disposed between the neighboring elongated light emitting diode mesas, the conductive material electrically connecting the first conductivity type layer of one mesa B to the second conductivity layer of the neighboring mesa B along the long dimension of the neighboring mesas to series-

interconnect the light emitting diode mesas. Collins et al. fail to disclose the required thermally conductive bondpad structure. However, Tsai discloses a backlight module and heat dissipation structure thereof where in claims 3 and 13, the required thermally conductive bondpad structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required thermally bondpad structure in Collins et al. as taught by Tsai, in order to have a semiconductor device with better heat dissipation characteristics.
